

AIX ALEPH · PROOF PACK

Operational readiness brief for investor and strategic review

Operating Signals

AIX ALEPH is already live in a production-shaped operating state with security, recovery and diligence foundations visible to external review.

Live Stack

Web, API, DNS, TLS and protected portal access are already active on dedicated infrastructure.

Ops Discipline

Daily checks, PostgreSQL backups and runbooks support disciplined operation and recovery.

Market Timing

Public March 2026 signals from Germany linked fuel-price pressure to stronger EV interest and infrastructure

01 · Production Baseline

AIX ALEPH is already live on dedicated infrastructure with functioning web, API, DNS, TLS and protected portal access.

This brief helps investors move from narrative to verifiable operating reality without relying on speculative product theatre.

02 · Security and Auth

The stack uses fail-closed authentication logic, cookie-bound session validation, protected portal routes and disciplined session handling.

Security hardening, smoke validation and credential rotation procedures are part of the active operations workflow.

03 · Monitoring and Recovery

Health endpoints, cron-based daily checks and PostgreSQL backup automation are already configured.

Recovery paths, deployment notes and operations runbooks are documented for disciplined execution under real operating conditions.
